

# County of Del Norte

## 2017 Pavement Management Plan

Prepared for the Del Norte Local  
Transportation Commission by the Del Norte  
County Community Development Department  
Roads Division

## **Pavement Management Background**

Del Norte County has 299.962 miles of roads accepted into the County Maintained Road System. For the purpose of the Pavement Management Plan, only 180.938 miles were evaluated. The remaining 119.024 miles include 98.78 miles of gravel roads and 20.23 miles of roads located within undeveloped subdivisions with environmental issues. The County uses the Pavement Management System (“PMS”) for periodical reporting of the County’s paved road surfaces. Roads Division staff have updated the PMS in 2011, 2014 and now in 2017.

The rating system is based on a 1 to 10 scale with a one representing a failed surface and a 10 representing an excellent surface. Figure 1 on the following page illustrates the rating system.

The County’s paved road surfaces are a combination of asphalt and chip seals. Roughly 96.7 miles of roads are an asphalt surface and 84.23 miles are of a chip seal surface. Countywide, the average Pavement Management System Rating for asphalt roads is 6.313 and average Pavement Management System Rating for chip seal roads is 5.492. For the most part, County Maintained Roads are in Fair to Good condition based on the results of the recent survey.

# PAVEMENT MANAGEMENT RATING SYSTEM<sup>1</sup>

Surface Rating	Visible Distress*	General conditions/treatment measures
<b>10</b> <b>Excellent</b>	None.	New construction
<b>9</b> <b>Excellent</b>	None	Recent overlay. Like new.
<b>8</b> <b>Very Good</b>	No longitudinal cracks except reflection of paving joints. Occasional transverse cracks, widely spaced (40' or greater). All cracks sealed or tight (open less than 1/4").	Recent sealcoat or new cold mix. Little or no maintenance required.
<b>7</b> <b>Good</b>	Very slight or no raveling, surface shows some traffic wear. Longitudinal cracks (open 1/4") due to reflection or paving joints. Transverse cracks (open 1/4") spaced 10' or more apart, little or slight crack raveling. No patching or very few patches in excellent condition.	First signs of aging. Maintain with routine crack filling.
<b>6</b> <b>Good</b>	Slight raveling (loss of fines) and traffic wear. Longitudinal cracks (open 1/4"– 1/2"), some spaced less than 10'. First sign of block cracking. Sight to moderate flushing or polishing. Occasional patching in good condition.	Shows signs of aging. Sound structural condition. Could extend life with sealcoat.
<b>5</b> <b>Fair</b>	Moderate to severe raveling (loss of fine and coarse aggregate). Longitudinal and transverse cracks (open 1/2") show first signs of slight raveling and secondary cracks. First signs of longitudinal cracks near pavement edge. Block cracking up to 50% of surface. Extensive to severe flushing or polishing. Some patching or edge wedging in good condition.	Surface aging. Sound structural condition. Needs sealcoat or thin non-structural overlay (less than 2")
<b>4</b> <b>Fair</b>	Severe surface raveling. Multiple longitudinal and transverse cracking with slight raveling. Longitudinal cracking in wheel path. Block cracking (over 50% of surface). Patching in fair condition. Slight rutting or distortions (1/2" deep or less).	Significant aging and first signs of need for strengthening. Would benefit from a structural overlay (2" or more).
<b>3</b> <b>Poor</b>	Closely spaced longitudinal and transverse cracks often showing raveling and crack erosion. Severe block cracking. Some alligator cracking (less than 25% of surface). Patches in fair to poor condition. Moderate rutting or distortion (1" or 2" deep). Occasional potholes.	Needs patching and repair prior to major overlay. Milling and removal of deterioration extends the life of overlay.
<b>2</b> <b>Very Poor</b>	Alligator cracking (over 25% of surface). Severe distortions (over 2" deep) Extensive patching in poor condition. Potholes.	Severe deterioration. Needs reconstruction with extensive base repair. Pulverization of old pavement is effective.
<b>1</b> <b>Failed</b>	Severe distress with extensive loss of surface integrity.	Failed. Needs total reconstruction.

\*Individual pavements will not have all of the types of distress listed for any particular rating. They may have only one or two types.

## Pavement Conditions by Road Classification June 30, 2017

Pavement Conditions by Road Classification June 30, 2017													
Road Classification	PCI for Class	Road Miles	% of Total	Bad 0-2		Poor 2.1-4		Fair 4.1-6		Good 6.1-8		Best 8.1-10	
				Miles	%	Miles	%	Miles	%	Miles	%	Miles	%
Arterials	5.67	2.040	1.12%	0	0%	.9	44.1%	.84	41.2%	.3	14.7%	0	0%
Collectors	6.39	86.210	47.65%	0	0%	15.694	18.2%	36.440	42.27%	28.636	33.32%	5.440	6.30%
Local Roads	5.91	92.688	51.23%	2.22	2.39%	17.847	19.25%	43.041	46.44%	25.126	27.11%	4.454	4.81%
Total County	6.04	180.938	100%	2.22	1.23%	34.441	19.03%	80.321	44.39%	54.062	29.88%	9.894	5.47%

## Visual Illustration of Pavement Conditions by Rating

Best: New road or newly repaved. Almost no cracks, pavement is smooth and level. Just the very top of the aggregate is beginning to show.

Typical PASER rating is between 8 and 10.

Good: A little older, maybe ten years since paving. Low-level cracking showing up, aggregate exposed 30%, some smooth patching or utility cuts.

Typical PASER rating is between 7 and 8.

Fair: 15- to 20-year-old pavement. Extensive low-level cracking, some alligator and block cracking showing up, surface getting very weathered, dips and sags, many patches.

Typical PASER rating is between 5 and 6.

Poor: 20- to 30-year-old pavement. Medium to high level alligator and block cracking over most the road, some potholes, heavy weathering with aggregate, (individual gravel pieces), actually coming off the road. Poor patches edges breaking down many bumps and dips, some potholes.

Typical PASER rating is between 3 and 4.

Failed/Bad: Old pavement, probably paved in bits and pieces. Entire road is covered with medium to high level cracking, pieces of pavement can be picked out of road surface by hand, many unfilled potholes, patches on patches, bad dips and sags, may have missing sections of pavement. High level weathering where aggregate may be dislodged by kicking the surface with your foot. It may have bad slippage tearing the pavement. The road would need to be totally reconstructed at this point.

Typical PASER rating is below 2.
